Education

Georgia Institute of Technology

Bachelor of Science in Computer Science

Concentration/Threads: Cybersecurity & Privacy, Intelligence

Expected Graduation: December 2026

Atlanta, GA

Relevant Coursework

- Data Structures
- Object Software Design
- Intro to AI
- Computer Architecture
- Information Security
- Machine Learning
- Systems Programming
- Database Integration

Technical Skills

Languages: Java, Python, C/C++, JavaScript, HTML, CSS, TypeScript

Frameworks/Tools: React, Node.js, Express.js, MySQL, Git, Firebase, Docker, MongoDB, Agile, Jira

Professional Experience

Principal Financial Group

2026

Software Engineering Intern (Principal Asset Management Team)

Des Moines, IA

- Help transition the core data infrastructure from MarkitEDM to cloud-based AWS solutions, improving scalability and reducing manual overhead
- Redesigned the S3 bucket lifecycle management API in an internal AWS CDK library that dynamically computes storage class transitions based on data retention policies

University of Indianapolis, Masters of Data Science Program

2025

Firmware Engineering Intern

Indianapolis, IN

- Embedded C firmware integrating with serial bus communication using the PICK-IQ protocol for multi-controller addressing and daisy-chained device control
- Improved configuration UI to streamline firmware updates, device onboarding, and device ID assignment
- System design directly influenced Endress+Hauser to develop a capital investment plan based on the proposed system
- Beta tested neural networks and deep learning programs and tuning configurations for course curriculum

Projects

Clarity | *React, Node.js, Express.js, MySQL, Plaid API, Firebase*

2026

- Built a full-stack personal finance dashboard with Google OAuth (Firebase) and the Plaid API to aggregate real-time balances and transactions across linked bank accounts
- Engineered an anomaly detection system using Z-score analysis to flag unusual spending with weighted risk scores
- Designed a normalized MySQL schema with foreign key constraints to persist user accounts, Plaid access tokens, and dismissed alerts; exposed via a RESTful Express API deployed on Railway

Game Recommendation System | *Python, Scikit-learn, Machine Learning*

2025

- Implemented supervised and unsupervised learning pipelines in Python using scikit-learn to model user-game preference classification
- Performed feature extraction and preprocessing with pandas, including normalization and categorical encoding of user and game metadata
- Trained and tuned Logistic Regression and Random Forest models, analyzing bias-variance tradeoffs
- Evaluated model performance using classification metrics such as accuracy and confusion matrices to assess recommendation quality

Paperless | *JavaScript, Google API, Firebase*

2024

- Developed a full-stack web application with a client-server architecture for querying, rating, and persisting book data
- Implemented Firebase Authentication for user-scoped access control and secure session management
- Integrated the Google Books API to retrieve book metadata and relevance information, enabling dynamic search and ranked results

HSE Apps | *React, MongoDB, JavaScript, Python*

2023

- Built and shipped a full-stack school scheduling platform using React and backend APIs for bell schedules, announcements, and lunch menus
- Implemented RESTful backend services in Python and JavaScript, supporting CRUD operations for clubs, meetings, and contact data
- Designed MongoDB schemas and optimized query patterns supporting 300+ daily active users, reducing redundant data access and improving response times
