Education

Georgia Institute of Technology

Bachelor of Science in Computer Science

Concentration/Threads: Artificial Intelligence, Cybersecurity & Privacy

Expected Graduation: December 2026

Atlanta, GA

Relevant Coursework

- Data Structures
- Object Oriented Design
- Artificial Intelligence
- Machine Learning
- Information Security
- Computer Architecture
- Systems and Networks
- Database Design

Technical Skills

Languages: Python, Java, C/C++, Go, JavaScript, TypeScript, HTML, CSS, MATLAB, Assembly

Frameworks/Tools: React, Node.js, Firebase, MySQL, MongoDB, AWS, Docker, Git, Pandas, NumPy, PyTorch

Professional Experience

Principal Financial Group

2026

Software Engineering Intern

Des Moines, IA

- Contributed to the transition of core data infrastructure from Markit EDM to AWS by modernizing a shared AWS CDK platform library (SQS, S3, Lambda constructs), improving scalability while maintaining backward compatibility
- Optimized a Morningstar/FactSet data matcher API by implementing batched requests and a fan-out AWS Lambda architecture for concurrent execution, reducing runtime by approximately 89%
- Proposed and designed a configuration-driven S3 lifecycle management feature for an internal AWS CDK construct, then led implementation to dynamically compute storage class transitions from data retention policy inputs

University of Indianapolis, M.S. in Data Science Program

2025

Firmware Engineering Intern

Indianapolis, IN

- Designed and built an end-to-end pick-to-light system integrating embedded firmware, hardware modules, wiring, controller communications, and a configuration interface
- Developed embedded C firmware using the PICK-IQ serial communication protocol for multi-controller addressing and daisy-chained device control
- Developed the configuration interface to support firmware updates, device onboarding, and device ID assignment
- Prototype and system design led Endress+Hauser to develop a capital investment plan for production deployment

Projects

Clarity | *React, Node.js, Express.js, MySQL, Plaid API, Firebase*

2026

- Built a full-stack personal finance dashboard with Google OAuth (Firebase) and the Plaid API to aggregate real-time balances and transactions across linked bank accounts
- Engineered an anomaly detection system using Z-score analysis to flag unusual spending with weighted risk scores
- Designed a normalized MySQL schema with foreign key constraints to persist user accounts, Plaid access tokens, and dismissed alerts; exposed via a RESTful Express API deployed on Railway

GitGud | *AWS Bedrock, DynamoDB, GitHub Actions, Python, TypeScript*

2026

- Architected an AI-powered GitHub agent using AWS Bedrock to enforce context-aware engineering policies across documentation, specifications, and test coverage
- Developed a DynamoDB-backed pipeline that transformed AST graph diffs into repository quality scores and automated code quality summaries
- Designed governance workflows that analyzed pull request changes and provided actionable feedback to improve repository health and compliance

Paperless | *JavaScript, Google API, Firebase*

2024

- Developed a full-stack web application with a client-server architecture for querying, rating, and persisting book data
- Implemented Firebase Authentication for user-scoped access control and secure session management
- Integrated the Google Books API to retrieve book metadata and relevance information, enabling dynamic search and ranked results

HSE Apps | *React, MongoDB, JavaScript, Python*

2023

- Built and shipped a full-stack school scheduling platform using React and backend APIs for bell schedules, announcements, and lunch menus
- Implemented RESTful backend services in Python/JavaScript, supporting CRUD operations for club and contact data
- Designed MongoDB schemas and optimized query patterns supporting 300+ daily active users, reducing redundant data access and improving response times
